

Professional AC Core Cutting Business Website

App Flow Document • v1.0 • Production UX Baseline

ITEM	SPECIFICATION
Product Type	Local service / lead-generation website
Primary Users	Homeowners, tenants, AC installers, contractors and businesses
Primary Goal	Generate qualified calls, WhatsApp enquiries and quote requests
Primary Device	Mobile-first, with full desktop support
MVP	Public website; no customer accounts/login
Main Conversion	Call / WhatsApp / Request a Quote

MASTER FLOW: Discover → Understand → Trust → Evaluate → Local Validation → Contact → Lead → Business Follow-up

Based on the approved Project Brief, PRD v1.0, TRD v1.0 and the project's UI/UX specification.

1. Product Flow Architecture

The website is a public, mobile-first lead-generation application. The customer does not need an account to complete the primary journey. The flow is designed to minimize friction while providing enough evidence for a service decision.

CORE CUSTOMER JOURNEY

Search / Social / Referral / Direct → Home or Service Page → Understand Service → Trust Proof → Service Area → Call / WhatsApp / Quote → Lead Destination → Business Follow-up

LAYER	USER QUESTION	SCREENS	DESIRED OUTCOME
Discover	What is this?	Home / Service page	Understand service
Evaluate	Can I trust them?	Gallery / Reviews / About	Build confidence
Validate	Do they serve me?	Service Areas / Contact	Confirm coverage
Decide	How can I contact them?	Header / CTA / Contact	Choose channel
Convert	Can I send my requirement?	Quote form	Submit enquiry
Follow-up	What happens next?	Success / business workflow	Business receives lead

2. Global Navigation Flow

Navigation acts as both an orientation system and a conversion system. Every approved route should be reachable without a deep hierarchy.

DESKTOP

Logo → Home | Services → Service detail | About | Gallery | Reviews | FAQ | Service Areas | Contact → Get a Quote

MOBILE

Logo + Menu → Home → Services → About → Gallery → Reviews → FAQ → Service Areas → Contact → WhatsApp / Call

- Desktop header: approximately 72–80 px, white, sticky on scroll if desired.
- Mobile header: compact logo + menu; menu contains all primary routes.
- Active route should be visually identifiable.
- Footer repeats useful navigation and business contact context.
- Important conversion actions should not depend on the user returning to Home.

NAVIGATION DECISION RULE

When a visitor is already on a service page, the most useful next paths are proof (Gallery/Reviews), answers (FAQ), coverage (Service Areas) and conversion (Call/WhatsApp/Quote).

3. Homepage Flow

The homepage is the main entry point for broad searches, referrals and direct visits. It progressively answers the customer's questions before presenting the final conversion opportunity.

ORDER	SECTION	USER STATE	PRIMARY ACTION	NEXT
01	Header	Orient	Choose navigation / Quote	Selected route
02	Hero	First impression	Understand + CTA	CTA / Scroll
03	Why Choose Us	Evaluate trust	Scan proof	Services
04	Services	Match need	Open service	Detail page
05	How It Works	Reduce uncertainty	Understand process	Gallery
06	Recent Work	Verify real work	Inspect photos	Reviews
07	Reviews	Seek proof	Read approved reviews	FAQ / Contact
08	FAQ	Resolve hesitation	Expand question	Areas / Contact
09	Service Areas	Validate location	Check coverage	Contact
10	Final CTA	High intent	Call / WhatsApp / Quote	Conversion
11	Footer	Utility	Navigate	Selected route

Homepage shortcut flows

Hero → WhatsApp | Service card → Quote | Gallery → Contact | FAQ → Call | Service Area → WhatsApp.
The user may convert at any stage.

4. Services Discovery & Detail Flow

The Services overview is a decision screen. Each service detail page is an intent-building screen that explains the work and provides a direct contact path.

SERVICE	ROUTE	PRIMARY INTENT	CONVERSION
AC Core Cutting	/services/ac-core-cutting	AC wall opening	Quote / WhatsApp / Call
RCC Core Cutting	/services/rcc-core-cutting	RCC cutting	Contact
AC Drain Hole	/services/ac-drain-hole	Drain/water passage	Contact
Concrete Wall Drilling	/services/concrete-wall-drilling	Wall drilling	Contact
Pipe & Cable Passage	/services/pipe-cable-passage	Pipe/cable opening	Contact
Other Services	/services/other	Other verified service	Contact

SERVICE DETAIL FLOW

Service Hero → **What is it?** → **When is it required?** → **Process** → **Benefits** → **Work Photos** → **FAQ** → **Service Area** → **CTA**

A service page must not become a dead end. The user can always reach Call, WhatsApp or Request a Quote while remaining in the service context.

5. Trust & Proof Flow

Core cutting is an on-site physical service. Customers need evidence that the business performs real work. Trust surfaces therefore form a deliberate part of the flow.

TRUST PATH

Service Claim → Why Choose Us → Real Work → Reviews → About / Equipment → FAQ → Contact

SURFACE	USER NEED	CONTENT RULE	EXIT
Why Choose Us	Quick confidence	Verified accuracy/equipment/reliability points	Continue
Gallery	Evidence	Real project photographs	Contact
Reviews	Social proof	Approved testimonials / public source	Contact
About	Who is behind work?	Business story / experience / equipment	Contact
FAQ	Can they handle it?	Plain answers to real questions	Contact
Service Areas	Will they serve me?	Genuine locations only	Call / WhatsApp

TRUST RULE

Never fabricate reviews, project photographs, experience, certifications, pricing or service areas. The project documents explicitly require business-specific information to be accurate and owner-supplied.

6. Contact Decision Flow

Three conversion paths serve different customer preferences and urgency levels.

CHANNEL	USER NEED	FLOW	OUTCOME
Call	Urgent / prefers voice	CTA → phone app → call	Direct conversation
WhatsApp	Fast chat / written enquiry	CTA → WhatsApp → conversation	Chat / media exchange
Quote	Structured written request	CTA → form → validate → submit	Lead captured

CTA PLACEMENT

- Header: Get a Quote; Call/WhatsApp as appropriate.
- Hero: Get a Quote + WhatsApp, with Call available.
- Service details: service-specific CTA.
- Gallery / Reviews / FAQ / Service Areas: contextual contact CTA.
- Contact page: all three conversion options.
- Mobile: persistent Call + WhatsApp bottom bar.

MOBILE STICKY BAR

7. Quote Request Flow

The quote form is the structured lead-capture path. It collects only useful information and provides clear feedback at every state.

FORM FLOW

Request Quote → Form Open → Enter Details → Validation → Submit → Server/API Validation → Spam Protection → Lead Destination → Success / Safe Error

FIELD	PURPOSE	UX / VALIDATION	REQ.
Name	Identify customer	Short text; sensible maximum	Yes
Phone	Follow-up	Phone format validation	Yes
WhatsApp preference	Contact preference	Simple control	Optional
Service type	Understand job	Actual service list	Yes
Location	Check coverage	Area/city; minimal data	Yes
Message	Job context	Length limit	Optional

FORM STATES

STATE	UI BEHAVIOR	USER RESPONSE
Default	Normal controls	Enter details
Focus	Visible focus state	Continue
Validation Error	Field-level message	Correct field
Submitting	Loading + duplicate prevention	Wait
Success	Confirmation	Optional Call / WhatsApp
Safe Error	Generic failure	Retry / Call / WhatsApp

8. Lead Handoff / System Flow

The user-facing form ends at a secure server/API boundary. The business receives the enquiry through the approved destination selected during implementation.

BROWSER → SERVER → LEAD

Browser Form → HTTPS POST → Server/API → Validate & Sanitize → Spam Protection → Operational Logging → Email / Approved CRM / Business Workflow

BOUNDARY	REQUIREMENT	FAILURE BEHAVIOR
Browser	Collect only useful fields	Prevent obvious invalid input
HTTPS endpoint	Secure POST	Safe generic response
Validation	Required fields, phone, length, safe handling	Reject invalid request
Spam controls	Rate limit / honeypot / CAPTCHA-equivalent if needed	Throttle / reject abuse
Logging	Operational failures; minimal personal data	Log safely
Lead destination	Email / CRM / workflow	Do not expose internal errors

Security principle: no private credentials, API keys or internal errors should be exposed to the browser.

9. Supporting Page Flows

PAGE	ENTRY	CORE FLOW	EXIT
Gallery	Home / Nav / Services	Category → Browse → Inspect	Contact / Quote
Reviews	Home / Nav	Read approved reviews → Source	Contact / Call
FAQ	Home / Service / Nav	Question → Answer	Contact / Areas
Service Areas	Home / Contact / Nav	City → genuine nearby areas	Call / WhatsApp
About	Home / Nav	Story → Experience → Equipment	Contact
Contact	CTA / Nav / any page	Call / WhatsApp / Form / Map	Lead

CROSS-LINKING RULE

Every informational page should provide a relevant next action. Avoid dead ends such as a Gallery page that cannot naturally lead to Contact or Quote.

10. Mobile-First App Flow

Mobile is the primary device context. The mobile layout is not a reduced desktop layout; it is the primary conversion experience.

MOBILE MASTER FLOW

Landing → Hero → CTA / Scroll → Services → Real Work → Reviews / FAQ → Service Area → Sticky Call / WhatsApp → Conversion

PRIORITY	USER QUESTION	UI RESPONSE
1	What service is this?	Strong hero headline
2	Can I trust them?	Real work + verified trust points
3	Can they handle my need?	Service detail + FAQ
4	Do they serve me?	Service Areas
5	How do I contact them?	Sticky Call / WhatsApp + Quote

- Sticky action bar remains accessible while scrolling.
- It must not cover content or form controls.
- Use clear labels, not icon-only controls.
- Reserve bottom page space for the persistent bar.

11. Edge Cases & Recovery Flows

SCENARIO	NORMAL FLOW	RECOVERY
Invalid form	Submit → validation error	Correct field → retry
Duplicate submit	Submit → duplicate prevention	Wait for result
Server failure	Submit → safe error	Retry or Call/WhatsApp
Spam/rate limit	Submit → blocked/throttled	Use legitimate contact route
Missing image	Image unavailable	Graceful fallback
Map failure	Map unavailable	Address + map link if available
No reviews	Reviews empty/limited	Show only approved content
Area not served	Location checked	Clearly state coverage
User changes service	Service detail → Services	Choose another service
Urgent customer	Any page	Sticky Call/WhatsApp shortcut

Recovery principle: secondary-feature failure must never prevent the primary contact paths from working.

12. Analytics Flow

Analytics should measure meaningful conversion transitions while remaining privacy-conscious.

EVENT	TRIGGER	FLOW PURPOSE
phone_click	Phone CTA activated	Direct-call intent
whatsapp_click	WhatsApp CTA activated	Chat intent
quote_start	Quote flow started	Form intent
quote_submit	Quote successfully submitted	Structured lead
map_click	Map/location action	Local validation
service_cta_click	Service CTA activated	Service-specific intent

FUNNEL REPORT

Visitors → Service/CTA interactions → Phone / WhatsApp / Quote starts → Quote submissions → Qualified business follow-up

13. Accessibility Flow Requirements

FLOW ELEMENT	REQUIRED BEHAVIOR
Navigation	Semantic, keyboard accessible, logical focus order
Mobile menu	Predictable open/close and accessible labels
FAQ	Keyboard-operable accordion with expanded/collapsed state
Forms	Labels, associated errors, clear required treatment
Buttons	Meaningful accessible names + adequate touch targets
Images	Meaningful alt text or decorative treatment
Motion	Subtle; respect reduced-motion preferences
Contrast	Readable text and controls in all states

Accessibility is part of the flow itself, not only a final QA task.

14. Complete End-to-End Customer Flow

This is the master flow to use for wireframes, high-fidelity UI, development and QA.

15. Screen Inventory & Flow Map

SCREEN	PRIMARY ENTRY	MAIN EXIT PATHS	PRIORIT Y
Home	Search / direct / referral	Services / Proof / FAQ / Areas / Contact / CTA	P0
Services	Nav / Home	Service detail / Contact	P0
Service Detail ×6	Services / internal links	Quote / WhatsApp / Call / FAQ / Areas	P0
About	Nav / Home	Services / Contact	P0
Gallery	Nav / Home / Services	Contact / Quote	P0
Reviews	Nav / Home	Contact / Call	P0
FAQ	Nav / Home / Service	Contact / Areas	P0
Service Areas	Nav / Home / Contact	Call / WhatsApp / Contact	P0
Contact	Nav / CTA / internal links	Call / WhatsApp / Quote / Map	P0
Quote Success	Form submit	Call / WhatsApp / Home	P0
Quote Error	Form failure	Retry / Call / WhatsApp	P0

P0 = required for the approved MVP flow.

16. App Flow Acceptance Criteria

- Every approved page has a defined entry point and useful exit path.
- Call, WhatsApp and Get a Quote are easy to reach from the homepage.
- Every service detail page has a direct conversion path.
- Mobile users have persistent access to Call and WhatsApp.
- Quote form collects only useful lead information.
- Invalid submissions are clearly explained.
- Successful submissions produce a clear success state.
- Server/API validates and sanitizes untrusted input.
- Spam/rate protection is applied where needed.
- Real work, reviews and service areas function as trust surfaces.
- No fabricated business claims, reviews, images or locations are used.
- Informational pages link naturally toward conversion.
- Analytics events correspond to meaningful lead actions.
- Keyboard navigation, labels, focus and contrast work across the flow.
- The complete journey works across common mobile, tablet and desktop widths.

FLOW DEFINITION OF DONE

A production-ready flow is complete when a first-time visitor can discover the service, understand it, gain enough trust, verify coverage and contact the business through the preferred channel with minimal friction.

17. Final Flow Lock

The website should be treated as one conversion system rather than a collection of independent pages.

THE CORE EXPERIENCE

WHAT DO YOU NEED?

AC Core Cutting / RCC / Drain Hole / Wall Drilling / Pipe & Cable Passage

CAN I TRUST THEM?

Real work + verified business information + approved reviews

DO THEY SERVE MY AREA?

Genuine service-area information

HOW DO I CONTACT THEM?

Call / WhatsApp / Request Quote

FINAL FLOW

DISCOVER → UNDERSTAND → TRUST → EVALUATE → LOCAL VALIDATION → CONTACT → LEAD → FOLLOW-UP

Business-specific information remains an implementation dependency and must be supplied accurately before production launch.

APP FLOW SPECIFICATION v1.0 • Production UX Baseline
