

PRODUCT REQUIREMENTS DOCUMENT

Professional AC Core Cutting Business Website

PRD v1.0 • Production Website

Product	AC Core Cutting Business Website
Product Type	Local service / lead-generation website
Primary Users	Homeowners, tenants, AC installers, contractors and businesses
Primary Business Goal	Generate qualified calls, WhatsApp enquiries and quote requests
Primary Device	Mobile-first, with full desktop support
Status	Product requirements finalized; business-specific content pending

1. Product Vision

Create a trustworthy, fast and conversion-focused website that helps customers understand the business, see proof of real work and contact the service provider within a few taps. The website should feel like a professional established local service brand rather than a generic template.

2. Problem Statement

Customers installing an AC often need a clean opening through a wall for copper refrigerant pipes, drain/water pipes and electrical cables. They need a reliable local professional who can perform the required core cutting or drilling accurately and with minimal mess. The website must make finding, understanding and contacting the business simple.

3. Goals & Success Metrics

Goal	Success Indicator
Lead generation	Increase qualified phone, WhatsApp and quote enquiries.
Trust	Visitors can quickly see services, real work, reviews and business information.
Local discovery	Pages are optimized for relevant service + location searches.
Mobile conversion	Key actions are accessible within one or two taps on mobile.
Performance	Fast page loads and strong Core Web Vitals on typical mobile connections.

4. Target Users

- **Homeowners:** Need an AC installed and require a wall opening for pipes/cables.
- **Tenants:** Need a practical local service with clear contact options.
- **AC technicians/installers:** May need a core cutting partner for installation jobs.
- **Contractors:** Need reliable drilling/core cutting for residential or commercial work.
- **Businesses:** Need wall openings or drilling for AC and related installations.

6. Functional Requirements

FR-01 — Navigation

The site shall provide clear navigation to Home, Services, About, Gallery, Reviews, FAQ, Service Areas and Contact. Mobile navigation shall be easy to use.

FR-02 — Hero CTA

The homepage shall prominently display service positioning plus Call, WhatsApp and Get a Quote actions.

FR-03 — Service pages

Each major service shall have dedicated content describing what it is, when it is needed, the process/benefits and a contact CTA.

FR-04 — Contact

The Contact page shall provide phone, WhatsApp, service area/address when applicable, map support and a quote/request form.

FR-05 — Quote form

The form shall collect only useful lead information, validate inputs, show success/error states and protect against basic spam/abuse.

FR-06 — Gallery

The Gallery shall present real project images, with categories and responsive image handling.

FR-07 — Reviews

The Reviews page shall display approved testimonials and, where available, provide a path to the business's public review profile.

FR-08 — FAQ

The FAQ shall answer common customer questions in concise, plain language.

FR-09 — Service areas

The Service Areas page shall identify the main city and nearby locations genuinely served.

FR-10 — Sticky actions

On mobile, persistent contact actions shall make WhatsApp/calling easy without blocking content.

FR-11 — SEO

Every indexable page shall support unique title, description, canonical URL and relevant structured data where appropriate.

FR-12 — Analytics

Key conversions such as calls, WhatsApp clicks and quote submissions shall be measurable.

7. Page Requirements

Page	Required Content / Behaviour
Home	Hero, services, trust points, process, recent work, reviews, FAQ preview, strong CTA.
Services	Service overview and individual service details with contact CTA.
About	Business story, experience, equipment and working approach.
Gallery	Real work images, categories, responsive viewing and optimized media.

Page	Required Content / Behaviour
Reviews	Testimonials and public review pathway when available.
FAQ	Customer-focused questions and concise answers.
Service Areas	Main city, nearby areas and location context.
Contact	Phone, WhatsApp, quote form, location/service area, map and hours if supplied.

8. UX Requirements

- Mobile-first layout with large tap targets and minimal friction.
- The primary service and location should be understandable within seconds of landing.
- Contact actions should remain visually prominent without becoming intrusive.
- Use real photography wherever possible to establish authenticity.
- Keep forms short; avoid asking for unnecessary personal information.
- Use clear loading, success and error states.
- Maintain accessible contrast, labels, keyboard navigation and meaningful alt text.
- Avoid excessive animation; motion should support hierarchy rather than distract.

9. Visual / Brand Requirements

- Modern, premium, industrial and trustworthy visual language.
- Professional neutral base with one strong brand accent chosen after branding is confirmed.
- Strong typography hierarchy with highly readable body text.
- Subtle shadows, borders, cards and restrained motion.
- Photography should prioritize actual machines, workers, drilling and completed jobs.
- Design must work consistently across phone, tablet and desktop.

10. Technical Requirements

Area	Requirement
Frontend	Next.js + TypeScript + Tailwind CSS recommended.
Architecture	Reusable components, maintainable page structure and clean separation of content/UI.
Images	Responsive, compressed and lazy-loaded where appropriate.
Forms	Validated, secure server/API handling with useful error states.
SEO	Metadata, sitemap, robots, canonical URLs and appropriate structured data.
Security	HTTPS, input validation, basic spam protection and safe handling of enquiries.
Performance	Minimize client JavaScript and optimize fonts, images and third-party scripts.
Deployment	Production hosting with custom domain and HTTPS.

11. SEO Requirements

- Focus on genuine local search intent: AC core cutting, AC pipe hole drilling, RCC core cutting, concrete wall drilling and related terms.
- Use unique, helpful content instead of keyword stuffing.
- Use location terms only for areas the business actually serves.
- Implement LocalBusiness/service structured data using accurate information.
- Create crawlable internal links between services, locations and contact pages.
- Add Open Graph/social metadata for clean sharing.
- Submit the sitemap after launch and connect the site to appropriate webmaster tools.

12. Conversion Funnel

Stage	Website Experience	Desired Action
Discover	Search/social/referral lands on page	Understand service immediately
Trust	Photos, services, reviews, experience	Continue exploring
Intent	Service details, FAQ, service area	Choose contact method
Convert	Call / WhatsApp / quote form	Submit enquiry
Follow-up	Business receives lead details	Contact customer and provide quote

13. Non-Functional Requirements

- Performance: target strong Core Web Vitals and fast initial rendering.
- Accessibility: follow practical WCAG-aligned patterns for navigation, forms, images and contrast.
- Reliability: broken links, form failures and missing images must be handled gracefully.
- Scalability: new services, locations, reviews and gallery items should be easy to add.
- Maintainability: reusable components and centralized business content where practical.
- Privacy: collect only information required for enquiries and protect submitted data.

14. Content & Data Dependencies

- Final business name and logo.
- Business phone and WhatsApp number.
- Main city and genuine service areas.
- Final service list.
- Business description and years of experience.
- Real work photographs.
- Approved customer testimonials/reviews.
- Business hours and address, if applicable.
- Google Business Profile/review URL, if available.

15. Acceptance Criteria

- All pages in the approved information architecture are implemented and linked.
- All primary CTAs work correctly on desktop and mobile.
- Quote/contact forms validate input and provide clear success/error feedback.
- The site displays correctly across current major browsers and common screen sizes.
- No placeholder business data remains at launch.
- Images are optimized and have appropriate alternative text.
- SEO metadata and crawl files are present and valid.
- Analytics/conversion events are configured for agreed lead actions.
- HTTPS, custom domain and production deployment are working.
- A final QA pass confirms navigation, forms, links, responsive layout and performance.

16. Out of Scope for MVP

- Full e-commerce/payment system.
- Complex customer accounts/login.
- Advanced online scheduling unless required later.
- Automated pricing calculator until standardized pricing rules are confirmed.
- Large CMS/admin platform unless ongoing content management requires it.

17. Future Roadmap

- Online appointment/request scheduling.
- Lead-management dashboard.
- Automated WhatsApp workflows.
- Multi-language experience such as English + Gujarati/Hindi.
- Service-specific quote calculator.
- SEO content/blog section.
- Review-request automation.

PRD conclusion: The MVP should prioritize trust, local discovery, speed and lead conversion. Real business assets and accurate contact/service-area information are essential before production launch.
